"Powering Today With Tomorrow in Mind..."

Atlantic Coast Energy Becomes First Natural Gas Utility Member As Well As First Florida GEC Regional Chapter Board Member

WASHINGTON, D.C., JANUARY 8, 2009

The National Green Energy Council is proud that a natural gas provider has finally become a member of it's organization. "Hopefully other utilities will finally realize that we are a different type of NGO. We want everyone at the table, and no one on the menu. It just has to happen in order for all of us to come up with viable solutions to tackle a problem as big as Global Climate Change" said National President, Ralph Avallone.

Atlantic Coast Energy Corporation (Atlantic or the Company) was founded in 2008 as a privately held MBE (Minority Business

Enterprise). Atlantic's business model is to provide natural gas in certain markets, beginning in Florida and New York.

The Company's primary objective is to deliver simple to understand and cost competitive services focusing on what matters most - service quality and cost. Atlantic takes pride in its position at the forefront in increasing minority representation in the energy industry. Atlantic Coast Energy's reputation will be branded on integrity, value and an unwavering commitment to understanding and serving the wants and needs of its customers and investors. These fundamental values will ensure that the Company continues to focus on providing competitive prices, flexible payment options, customized rate plans and reliable customer support. In addition, Atlantic is committed to expanding its product offerings to include renewable/alternative energy products and services that will reduce greenhouse gas emissions.

The National Green Energy Council has chartered a new chapter in the state of Florida. It is presently populating the Board of Directors of FRGEC (Florida GEC).

Mr. Derrell Walton, Atlantic Coast's CFO will be representing the company on the Florida Green Energy Council.

The GEC believes that Florida has phenomenal opportunities in regards to renewable energy, both on land, through solar applications as well as wind energy off the coast through off shore wind energy applications.

"Our mission here in Florida is simple. The GEC will strive to ensure that the right policies, regulations and legislation is crafted in order for "Green Tech" companies to thrive and create jobs in the sunshine state."said Avallone.

The International Green Energy Council is an educational non profit organization committed to educating from kindergarten students to International leaders about the importance of energy efficiency, environmental stewardship and renewable energy education in order to save our planet for future generations of humanity.
