

January 5, 2009

Mr. Avallone,

When my company began thinking about the idea of seeking to achieve the GEC product endorsement, we could have never imagined the actual rewards of achieving such a distinction. You and the National Green Energy Council are amazing!

We thought it would be nice to have the logo embossed on all of the bags of Green Patch coming off our manufacturing lines. We knew that this would somehow show the world that our product was going to revolutionize the cold patch industry by having an organization like the GEC stand behind our product.

When you suggested that we hold a National Press Conference in Washington, D.C. this past November, 2008 we thought it would be a great opportunity as well. We could have never imagined what the two would have done to open the flood gates of opportunities for our product.

Since Green Patch achieved GEC product endorsement and the subsequent National Press Conference the phones have been ringing off the hook. Orders are coming in from all over America. We are in exponential growth. Whole cities are now mandating the change to using our product.

Mr. Avallone, through your introduction to representatives at Con Edison, I am proud to say that we are now the recommended cold patch product that all subcontractors use for Con Ed. Your efforts assisting us now at the Federal level with the EPA are even more exciting.

In closing, we here at Cofire Industries, who manufacture the Green Patch product would like to thank you and the National Green Energy Council for all the amazing things that you do on a daily basis to promote "green" companies. We will always be honored that we are members of your organization and we will always stay committed to the National Green Energy Council.

Sincerely,

Glenn Shapiro
