## **National Green Energy Council's Efforts Assisting Small Town Reaps New Jersey State Energy Award**

WASHINGTON, D.C., OCTOBER 22, 2008 National Green Energy Council President Ralph Avallone stands along side Mayor Paul Kennedy, members of his town council and New Jersey Board of Public Utilities Commissioner Jeane Fox last Friday in Jersey City, New Jersey at the New Jersey Clean Energy Awards luncheon. Ocean Gate, N.J. is the first municipality in the Nation to pass an ordinance to generate all municipal power from two wind

turbines which will be constructed in the town over the next year.

The National Green Energy Council complimented the efforts of the visionary town council by educating it's residents about the benefits of renewable energy and dispelling the myths in regards to Wind Turbines. GEC president Avallone testified several times before the town council and performed presentations to local officials and residents.

The National GEC also co hosted a Wind Energy Summit for all Ocean County New Jersey mayors earlier this year in a partnership with the Borough of Ocean Gate.

"Our mission is education, whether it be a municipality as small as Ocean Gate with monumental ideas, or a kindergarten student who needs to understand the importance of energy conservation. It's just why we exist and it's great to see these small town officials awarded for being pioneers" Avallone said.

The International Green Energy Council is an educational non profit organization committed to educating from kindergarten students to International leaders about the importance of energy efficiency, environmental stewardship and renewable energy education in order to save our planet for future generations of humanity.

If you are a town official and you would like the National Green Energy Council to compliment your efforts in generating

your towns power from renewable energy sources please email us
