Mr. Ralph Avallone
President
Green Energy Council
1701 Pennsylvania Avenue
Suite 300
Washington, DC 20006

Dear Mr. Avallone,

On behalf of PJM and its employees, I want to thank you for your presentation on the activities of the Green Energy Council and ways that PJM employees can make better choices when it comes to their energy usage. The information and success stories you shared with the audience were eye-opening and I have received nothing but positive comments about you and your organization. I hope your message has resonated with our employees and that they begin to make better, greener choices in their lives – I know have.

PJM understands that the electric industry is at a crossroads. Demand for electricity continues to grow and supplies are getting tighter. At the same time, building conventional generation is getting more expensive with the cost of raw materials and fuels increasing daily, not to mention the likelihood of carbon legislation.

Our mission is to maintain the reliability and availability of the transmission system. To that end, PJM will continue to work to enable the addition of renewable sources of generation, such as wind and solar, to the bulk transmission system. We will also continue to develop stronger markets that enable demand response and energy efficiency to participate on the same level as traditional generation sources, which will also enhance reliability and availability.

Again, thank you for your time and knowledge. Hopefully, PJM will be able to partner with you and your organization in the future.

Sincerely,

A handwritten signature in cursive script that reads "Sean McNamara".
